

It takes more than pre-wired Cat 5 cable to make a working home media system.

Category 5 (Cat 5) is an industry standard that indicates a high level of performance for computer and telephone cable. However, proper termination of the cable at both the utility panel and the wall plate is necessary to deliver true Category 5 performance.

In addition, wiring must be run from the utility panel to outside communications links in order to provide your customer with a finished, ready-to-use system.

Alpine Technologies can do the whole job for you, from start to finish, inside the home or out.

From initial design and pre-wire, to trim-out and final testing, we know how to get the job done. We don't leave you with a roughed-in bundle of wires hanging from the wall, for someone else to finish at extra cost. You can be assured that your project dollars are buying a complete and working system.

Alpine Technologies' services go beyond the interior wiring applications. We can install all your outside telecom infrastructure, including buried telephone cable, fiber optic runs and wireless or satellite links. We can design a system to serve a multi-building campus, or an entire planned community.

After the job is finished, Alpine Technologies will be there to service the homeowner.

Alpine Technologies can provide ongoing technical support to your homebuyer, such as configuration changes, expansion and systems management.

At Alpine Technologies, we know how to design and install telephone and computer systems.

We've been doing this for over 20 years. Alpine Technologies engineers are Microsoft Certified Professionals. Our customers include leading local businesses, as well as municipal and federal government agencies. Call us to learn how we can help you on your next job.

Connecting you to the Future

Leviton Integrated Networks™
HOME SYSTEM

Introducing a completely integrated home system for today's and tomorrow's homes.

Today's homebuyer wants a lot more than a place to live. They want a home that offers them amenities such as high-speed Internet access throughout the house, a home theater and whole-house audio/video. They want practical features such as a home office and the ability to share peripherals and printers. Because today's homebuyer is looking for so much, Alpine Technologies offers the Leviton Integrated Networks™ home system.

An expandable system ready for home networking, audio-video and more.

The heart of the Leviton Integrated Networks system is the Structured Media Center™ (shown at left), a panel that uses snap-in modules to allow easy installation, customization and future-proofing. There is a model for every application, from condo to custom home.

The Structured Media Center is linked to QuickPort® multimedia outlets that provide room connections for voice, data, video and audio. The popular Leviton Decora™ style outlets and controls are designed for appearance as well as performance, a touch that won't be lost on your homebuyer.

Questions?

What is Leviton Integrated Networks?

- Leviton Integrated Networks is the Leviton product line for home structured media, lighting, home control and surge protection

OK, what's a home-structured media system?

- A system that distributes everything that isn't powered by standard electrical voltage, including Internet, cable, VCR, DVD and satellite TV, phone and fax, stereo system, home and child monitoring

What can Leviton Integrated Networks do?

- Provides flexible access to computer, video and multi-phone lines from any wall jack. In-coming phone lines can be quickly connected to any room from a central utility panel
- Allows a single cable run to be used for either a telephone or a computer connection
- Easily expands for home office, small business and telecommuting needs
- Permits homes with more than one computer to share files, printers or scanners
- Allows high-speed Internet capability (DSL, Cable Modem, or Wireless) in any room
- Interfaces with home security systems
- Allows monitoring of home security video cameras from any TV in the house to help keep children and property safe
- Offers whole-house stereo with volume controls wherever speakers are found
- Permits remote control of home entertainment center video from any TV in the house
